

# LITTORA ICW 6 ANGLED MOUNT

## Product sheet

This angled mount has been designed to provide optimum control of sound directionality from your system. Tilting the loudspeaker to 30°, it ensures that sound is directed specifically towards the listening area. This angle guarantees clear vocal reproduction, enhances bass and mid-range perception, reduces the sensation of "distant" sound and ensures optimum coherence between several loudspeakers. What's more, you can adapt the position of the speaker around the features in your room (lighting, decor, architectural constraints), providing a bespoke, professional and aesthetically integrated installation.

### Key points

- The Littora 200 ICW 6 speaker can be tilted to 30° for optimum sound diffusion in all types of spaces.
- Discreet, elegant design, with robust construction for durable, professional integration.

|                        |                             |
